Connecticut

Sample Complete Streets Policy

September 2012

Presented by Connecticut Conference of Municipalities & Tri-State Transportation Campaign. Based on a draft policy prepared by Elan Planning.

Preamble
In June 2009, Connecticut Governor Jodi Rell signed the “Complete Streets” bill into law. The law, which passed with an overwhelming margin in the Connecticut General Assembly, requires that all transportation projects that receive state funding must consider using complete streets design features.

Connecticut’s Complete Streets law, which was the first of its kind in the tri-state area, dedicates 1% of transportation funding to bike and pedestrian infrastructure, establishes a Bicycle and Pedestrian Advisory Board, and directs the ConnDOT Commissioner to provide reports listing bicycle and pedestrian access projects funded by the State Transportation Fund and by federal programs like the Congestion Mitigation and Air Quality Program (CMAQ).

The concept of complete streets is not new, but it is becoming increasingly integrated into new projects and the regular maintenance or rehabilitation of local transportation systems.

Vision Statement
With the signing of the Complete Streets Law by Governor Rell, region-wide attention is being given to the concept of complete streets, which impacts the safety, health and vibrancy of Connecticut communities. The [insert municipality here] Complete Streets Policy will encourage the development of a complete streets network throughout the community to create a more balanced transportation system. The Complete Streets Policy shall be consistent with, and assist in achieving the goals and recommendations set forth in the [Municipality] Comprehensive Plan and other policy documents. The Policy shall ensure that new and updated public and private projects are planned, designed, maintained and operated to enable safe, comfortable and convenient travel to the greatest extent possible for users of all ages and abilities including pedestrians, bicyclists, motorists and transit riders.

Rationale for Complete Streets
The integration of land use and transportation is critical to the livability of a community and region. In a highly competitive global economy, regions and communities must learn to address each in a balanced manner to maintain a high quality of life for existing and future residents, business and visitors. Connecticut is currently undergoing significant employment and population shifts. New and existing residents and employees often have an expectation for a high quality of life, which often includes a walkable, bikeable and vibrant community. Incorporating complete streets into a community can assist in achieving this high quality of life.

“Complete street” designs are a routine approach for accommodating all travel modes for all users, regardless of age or ability. This results in a balanced transportation system providing choices of where people can go and how they can get there. Complete streets may include elements such as defined pedestrian and bicycles spaces, street trees and benches, pedestrian scaled lighting, and transit stop shelters. These elements allow people to safely walk to the library, take the bus to the grocery store or bike to the park. They also enable seniors in our communities to “age in place.” Complete Streets elements have the capacity to increase bicycle, pedestrian and transit use of the street system, which would positively impact the physical health and safety of the community, the environmental quality of our neighborhoods and the economic vitality of the [Municipality].

Complete Streets are not about building sidewalks and bicycle lanes on every street. They are not about massive takings of rights of way. They are about site-specific planning decisions that help to reconfigure existing road space in a manner that better accommodates the needs of
users. Sometimes, it’s as simple as moving the white line to create more space on the shoulder, or making sure the crosswalk light stays on long enough for an older pedestrian to get across the road.

Health
Public health officials have become increasingly aware of our nation’s declining physical fitness and the resulting increase in diseases such as diabetes and obesity. Much research has been conducted to identify a link between auto-dependent sprawl and an increase in sedentary lifestyle diseases. Research indicates that countries that invest in a more multi-modal transportation system (biking, walking, transit) have higher rates of bicycling and walking as well as lower rates of obesity. It is believed that the most practical and effective way to improve public fitness is to increase walking and bicycling.¹

Walking and biking can decrease the risk of diseases related to inactivity such as asthma, hypertension and obesity. In addition to their health benefits to individuals, walking and biking decrease automobile dependence, in turn improving air quality and the overall health of the environment we live in.

Safety
A generation ago, walking and bicycling to school or work was a common practice. Today, however, the number of people walking and bicycling to local destinations has dwindled. A major factor in this trend is a concern for safety. Recent Connecticut Department of Transportation statistics note that 121 pedestrians were killed on Connecticut streets in the three years from 2008 through 2010. 31.4% of these accidents were in New Haven, although the population of New Haven accounts for only 24% of all people living in Connecticut as of 2010. From 2007-2009, there were 94 pedestrian fatalities in Connecticut. Of these 94 fatalities, 35% were 60 years and older. Throughout the state, from 1999 to 2008, 31% of all pedestrians involved in accidents were aged 10-24 and 49% of pedestrians killed were over the age of 60.² Providing well-defined pedestrian and bicycle facilities coupled with an educational program is a way to help address the safety concerns often raised.

Environment
Increased greenhouse gas levels are negatively impacting the earth. Transportation accounts for 34% of greenhouse gases and for every gallon of gasoline burned, 20 pounds of carbon dioxide emissions is produced.³ The auto-centric manner in which our communities have grown is a critical factor supporting the consumption of carbon-based fuels in the U.S. Implementing a complete streets policy can have a positive impact on our environment by reducing the community’s reliance on a vehicular mode of transport and offering viable transportation options such as walking, bicycling and public transit.

Fiscal Impact
Designing complete streets is not additional work for planners, architects and engineers; it is different work. The practitioners of these disciplines have in the past been asked to solve a particular problem—namely, safely and efficiently moving the maximum number of cars past a given point in the shortest time. The Complete Streets Policy simply redefines the problem. Under this Policy, these professionals are required to use their knowledge and skills to design roads and a road network that safely and efficiently move all users, motorized and non-motorized. The fiscal impact is mitigated by the use of updated planning practices, prevention of delays in the design process and elimination of the need for costly retrofits.
The costs associated with the routine accommodation of alternative transportation modes (i.e. walking, biking and transit) generally represent a small percentage of a community’s overall budget. Infrastructure costs are reduced by requiring less pavement per user, which in turn reduces long-term maintenance costs. The resources that are spent equate into a long-term investment in the financial and physical health of [Municipality].

Additionally, the choices that can result from a complete streets policy can improve and maintain the economic vitality as well as support the economic vibrancy of [Municipality]. The downtown area can continue to be a target for growth and to support tourism in the region. Streets accommodating pedestrian and bicycle activity are welcoming and encourage residents and visitors to linger at local businesses, providing an important contribution to the tax base.

**Exemptions**

Where the [Municipality] or a private developer decides that accommodating all users is impractical or burdensome, they may document their determination to be exempt from the policy’s requirements. This documentation will be filled out and posted for each new street and sidewalk project. It lists who the decision makers are on the project, and the ways in which all users were accommodated, or the reasons they were not. Cost may be considered a valid basis for an exemption.

**Objectives and Guiding Principles:**

A. Incorporate locally sensitive “best practices” from United States Department of Transportation, Federal Highway Administration, American Association of State Highway & Transportation Officials, Institute of Transportation Engineers, Connecticut Department of Transportation, Americans with Disabilities Act and other appropriate entities to enable citizens to safely travel by all transportation modes, including bicycling, walking and transit ridership.

B. Promote the safe use of our multi-modal transportation system by increasing the awareness of all users through an appropriate educational program.

C. Reinforce collaboration with partners at the local, school district, county, state and federal levels to ensure appropriate connectivity for all travel modes.

**Optional Action Items:**

**Short-Term**

1. The [Municipality] shall appoint a Complete Streets Advisory Board to provide input on public projects to further the City’s complete streets philosophy. The Board will be solely advisory in nature and will consist of [seven] members. A liaison between the Advisory Board and [Municipality] is strongly encouraged. The Advisory Board meetings would be open to the public and would allow for public input. The Advisory Board would meet a minimum of twice per year and on an as-needed basis as called on by the [Municipality], the Land Use Boards or at the inception of public transportation projects within the [Municipality] limits.

2. Provide information about the [Municipality’s] complete streets policy and the Complete Streets Advisory Board on the website for easy public access.
3. Promote the safe use of a multi-modal transportation system by increasing the awareness of all users through an appropriate educational program. The Complete Streets Advisory Board could lead this effort with assistance from the Planning Office, local organizations, and the school district. Additionally, staff shall attend periodic workshops and training to remain well-informed of changes in the field.

4. Develop a “complete streets” checklist for all public projects undertaken within the [Municipality] to be reviewed by the Complete Streets Advisory Board during the project planning and design phase. The checklist may also be included in applications before the Land Use Boards for the review of private development projects. The Complete Streets Advisory Board, in conjunction with the Planning Office and Land Use Boards, will develop the checklist.

5. Coordinate with the School District and Department of Public Works to achieve shared goals related to Safe Routes to School. The [Municipality’s], Complete Streets Policy will result in a fully-connected transportation network for all modes of transportation. While not every street can be designed perfectly for every user, the development of Safe Routes to School will allow for “an interwoven array” of streets which adequately serve all modes of transit.

Mid-Term
6. Conduct a complete streets audit examining the accessibility, safety, connectivity and quality of place for an area in the [Municipality] that includes key community features and destinations. The Planning Office could lead this effort in coordination with the City’s Land Use Boards and Complete Streets Advisory Board. This information could be incorporated into a complete streets gap analysis map and a future Bicycle, Pedestrian and Public Transit Plan.

8. Identify current regulations within the City’s Zoning Ordinance and Subdivision Regulations which are consistent with a “complete streets” approach to roadway and streetscape development. Provide recommendations to further enhance guidelines and requirements for private development projects. Also identify possible amendments to the zoning ordinance and subdivision regulations that can further support complete streets.

Long-Term
10. Complete a Bicycle, Pedestrian and Public Transit Plan including a map, illustrating gaps in pedestrian, bicycle and transit friendly components. The results of the complete street audit could be the basis for this plan and could assist in identifying complete streets needs and priorities within the City. Such a plan may also include recommendations for enforcement throughout the City related to complete streets.
